Sacramento, CA | sasik.kanduri@gmail.com | [linkedin/sasikanduri](https://www.linkedin.com/in/sasikanduri) | (947) 243-5008

EDUCATION

Master of Science, Computer Science	California State University, Sacramento	Aug 2022 – Dec 2024
Bachelor of Science, Information Technology	JNTUH, India	Sep 2013 – May 2017

TECHNICAL SKILLS

Languages/Frameworks: Python, Java, C#/.NET, JavaScript, TypeScript, React, Flask, FastAPI, LangGraph, pySpark

Technologies/Software: Git, Maven, UV, Docker, AWS, Airflow, Linux, Pega PRPC 7.x/8.x

Databases: MS SQL, PostgreSQL, MongoDB

WORK EXPERIENCE

Office of Water Programs California, USA	Full Stack Engineer	Jun 2023 – Present
---	----------------------------	---------------------------

- Lead developer on a state-wide water quality analytics and training platform; Built frontend with React and backend microservices with Python (Flask/FastAPI), SQLAlchemy, Alembic and CloudWatch.
- Designed the AWS infrastructure: ECS Fargate for backend services, S3 + CloudFront for SPA frontends, RDS SQL Server for the database, and Bitbucket Pipelines for CI/CD.
- Authored an internal Python SDKs applying object-oriented design to package hydrologic and water quality analyses into reusable classes, producing statistical summaries, visualizations, and structured results used across the platform's APIs and analytical workflows.
- Built Airflow DAGs for sampling schedules, data analysis, and contamination result notifications across 2,000+ water systems; incorporated date mismatch resolution using LLM calls to automatically reconcile sample collection dates against lab reports, reducing manual correction effort by 90%.
- Implemented a checkout system using PayPal Expanded Checkout for eLearning course purchases, handling \$10,000+ in daily transactions, with CloudWatch and SNS for monitoring and alerts.
- Built an internal document Q&A chatbot using a RAG pipeline; parsed and indexed internal documentation with a vector search layer to enable natural language querying over institutional knowledge.

Graphwear Technologies California, USA	Software Engineer Intern	Apr 2025 - Jul 2025
---	---------------------------------	----------------------------

- Built and deployed a FastAPI backend on AWS to ingest and analyze sensor data from a Bluetooth wearable, serving endpoints for the iOS app and internal dashboards.
- Contributed core iOS features in Swift, including Bluetooth packet parsing at a 30-second interval and observer-based state management for near real-time lactate readings.
- Set up infrastructure-as-code and CI/CD with AWS CloudFormation and Bitbucket Pipelines, automating provisioning, testing, and deployment.

Aaseya Hyderabad, India	Software Engineer	Aug 2020 – Jun 2022
----------------------------------	--------------------------	----------------------------

- Built backend microservices in Spring Boot powering data exchange for a court management system; implemented JWT authentication, centralized exception handling, and role-based access control.
- Developed an end-to-end Hearings Management module, enabling judges to schedule, reschedule, and cancel hearings across multiple case types with REST APIs and role-based access for appellants, defendants, and judges.
- Contributed to workflows like case registration, travel ban and others on Pega using parent-child case hierarchies (pyWorkCover and covered cases), circumstanced rules, cascading and authority matrix approvals; handled multi-stage processing using subprocesses, flows, and SLAs for time-bound escalations.
- Integrated with external systems via Connect-REST with connection problem flows for graceful failure handling; debugged complex production issues using Clipboard and Tracer to inspect runtime case states and rule resolutions.

JK Tech Hyderabad, India	Software Engineer	Jan 2019 – Aug 2020
-----------------------------------	--------------------------	----------------------------

- Developed scalable C#/.NET backend services for the Government of Andhra Pradesh's E-Pragati (OnePortal) platform, implementing services for examination scheduling, real-estate registrations, and Helpline Counter operations with REST APIs and integrations for CCAvenue payment gateway support.
